# Assignment

1. Implement a login screen with phone number OTP verification code
2. OTP screen should have 4 inputs for entering OTP. Once one value is filled, next input should be auto focused. On back press, previous input should be auto focused

The assignment is to be built using React Native and related ecosystem of tools (No external library to be used for OTP component).
The assignment should be submitted by sending us the GitHub link with a proper readme as to how to run the application.
